Your legacy. Secured.

*Automated inheritance for the digital era. Protect your wealth
with sovereign-grade smart contract vaults.*

INITIATE VAULT

EXPLORE PROTOCOL

Self-custody

You stay in control

Multi-heir

Up to 10 heirs

Smart timer

On-chain heartbeat

The Multi-Billion Dollar Gap

Digital wealth is fragile and disconnected from tradition.

The Pain Point

Billions in crypto assets are lost forever when holders pass away or lose access to private keys.

Legal Friction

Traditional legal systems lack the infrastructure to manage or distribute sovereign on-chain assets.

The Herita Solution

Programmable security for the succession of digital assets.

Smart Vaults

Non-custodial Smart Contracts on the Solana blockchain ensure total control for the user.

Automatic Transfer

Assets sent to heirs after inactivity, without lawyers or intermediaries.

How It Works

The seamless user journey to securing your digital legacy.

1. Create Vault

Deposit your assets (SOL/Tokens) into a secure smart contract.

2. Define Heirs

Specify your heirs and set the distribution percentages.

3. Set Timer

Configure inactivity period (e.g., 6 months) for trigger.

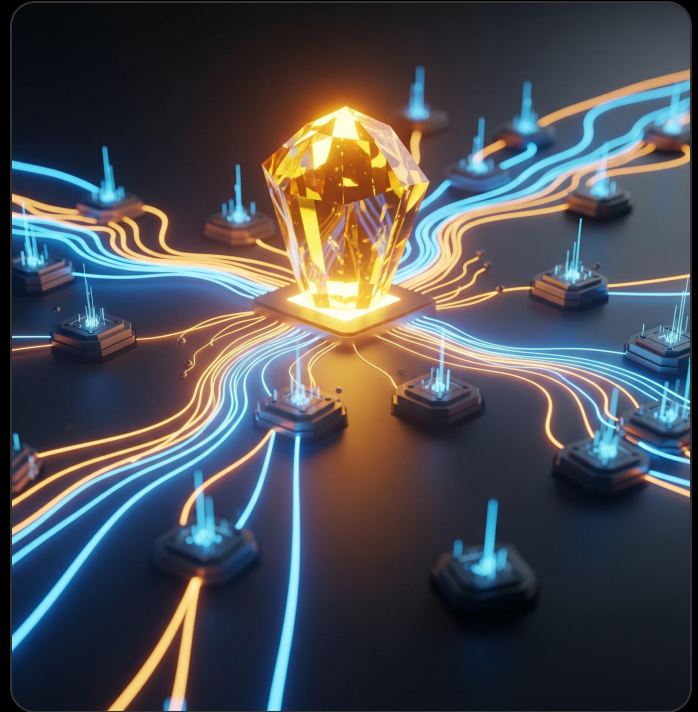

4. Check-ins

Sporadic check-ins to prove activity and reset the clock.

5. Release

If timer expires, Keepers trigger the automatic release of funds to heirs.

The Market Opportunity

Digital asset succession is an untapped blue ocean market.

Global Growth

The global crypto market cap is in the trillions, with the first generation of holders now entering the age of succession planning.

Blue Ocean

While crypto adoption scales, inheritance infrastructure remains non-existent, creating a massive opportunity for early movers.

Business Model

Sustainable revenue streams powered by secure digital succession.

Setup Fee

One-time transparent cost at the moment of vault creation and deployment.

Maintenance Fee

Periodic subscription or small recurring fee to keep the smart contract active.

Claim & Keeper Fee

Small percentage fee applied during the asset redemption and inheritance execution.

Differentials & Security

Advanced architectural features for trustless digital succession.

100% Non-Custodial

Total control remains with you; not even Herita has access to your vault funds.

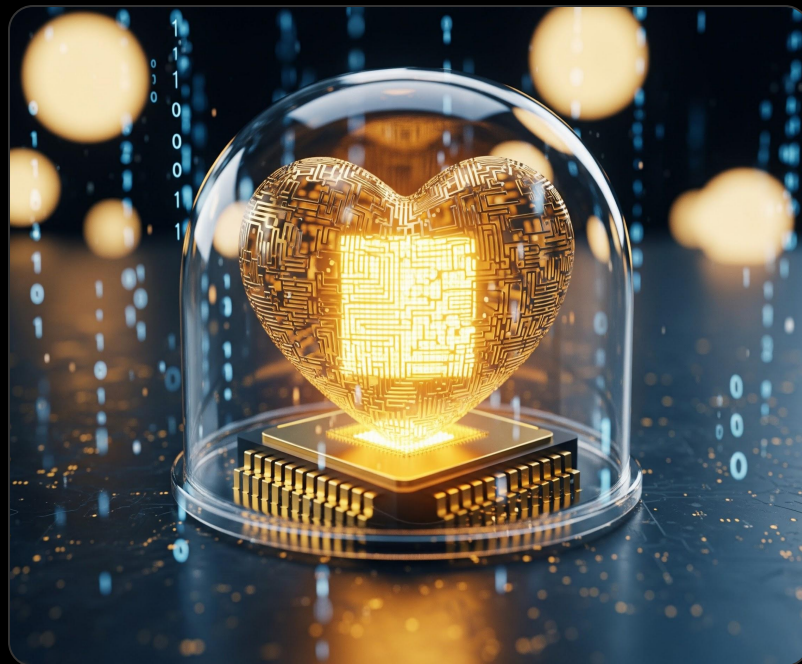

Autonomous Execution

Decentralized execution via Keepers ensures the contract triggers without fail.

Open-Source & Auditable

Transparent, community-verified code and professional security audits.

Roadmap

Expanding the ecosystem for a multi-chain future.

PIX Integration

Seamless fiat on/off ramp integration with the Brazilian instant payment system.

Multi-chain (EVM)

Expanding support to Ethereum, Polygon, and other EVM-compatible networks.

Multi-sig Vaults

Advanced corporate governance and shared digital heritage management.

Team

A brief summary of the founders and the team's technical expertise.

Gustavo Alves de Souza

Co-Founder & Product Strategy Lead

Crypto enthusiast since 2021 with Web3 investment experience and a technical systems development background. Responsible for product vision, business modeling, and market validation.

Michele Giane

Co-Founder & Frontend Engineer

AI enthusiast focused on digital product creation. Leads platform frontend development, UX, branding, and digital presence, leveraging modern AI tools for rapid execution.

Protect Your Legacy Today

Join the future of secure, decentralized digital succession.
